

# Home Mould Test Kit

- **Do-It-Yourself Test**
- **Quick & Simple To Use**
- **No Technical Expertise Required**
- **Test Up To 6 Rooms With A Choice of Kit**
- **All Instructions & Evaluation Guidance Included**

Mould can develop around the home environment usually as consequence of moisture or condensation build-up.

The deleterious effects of mould around the home are threefold, i.e. material deterioration, odour formation, & potential harm to health:

**Material Deterioration** – Utilising the material mould grows on can lead to damage & degradation

**Odour Problems** – Some moulds can emit an unpleasant smell which can be quickly released into the air

**Harm to Health** – Certain moulds can produce allergens & irritants, causing allergic reactions to susceptible individuals

**The Home Mould Test Kit** is ideal for use following flood & water damage or if your home suffers from excessive damp. All rooms can be tested & evaluated to home in on potential problem areas.

**The Home Mould Test Kit** contains everything needed for the detection & evaluation of airborne mould inc:

Settle Plates containing specific mould growth media & all instructions, evaluation guidance & information on the causes of mould growth
